# FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO Eastman Chemical Company

AUTHORIZING THE OPERATION OF Eastman Chemical Texas Operations U2 - Environmental Services All Other Basic Organic Chemical Manufacturing

#### LOCATED AT

Harrison County, Texas Latitude 32° 26' 15" Longitude 94° 41' 37" Regulated Entity Number: RN100219815

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No:	O1981	Issuance Date: _	
For the Co	mmission

#### **General Terms and Conditions**

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

#### **Special Terms and Conditions:**

#### Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

- 1. Permit holder shall comply with the following requirements:
  - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
  - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
  - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
  - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
  - E. Emission units subject to 40 CFR Part 63, Subpart A, DD, EEE, and FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter

- 113, Subchapter C, §113.100, §113.350, §113.620, and §113.890 respectively, which incorporates the 40 CFR Part 63 Subpart by reference.
- 2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
  - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
  - B. Title 30 TAC § 101.3 (relating to Circumvention)
  - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
  - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
  - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
  - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
  - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
  - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
  - I. Title 30 TAC § 101.222 (relating to Demonstrations)
  - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
- 3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
  - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
    - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
    - (ii) Title 30 TAC § 111.111(a)(1)(E)
    - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
    - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO<sub>x</sub>, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that

does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
  - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
  - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is

determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.
- B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:
  - (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
  - (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
  - (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO<sub>x</sub>, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
    - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
    - (2) Records of all observations shall be maintained.
    - Visible emissions observations of air emission sources or enclosed (3)facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
  - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
  - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:
  - (i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)
  - (ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)
  - (iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO<sub>x</sub>, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
    - (1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.
    - (2) Records of all observations shall be maintained.
    - Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer

visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
  - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)
  - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
  - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
  - (ii) Sources with an effective stack height (h<sub>e</sub>) less than the standard effective stack height (H<sub>e</sub>), must reduce the allowable emission level by multiplying it by [h<sub>e</sub>/H<sub>e</sub>]<sup>2</sup> as required in 30 TAC § 111.151(b)
  - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- 4. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
  - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
  - B. Title 40 CFR § 60.8 (relating to Performance Tests)

- C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)
- D. Title 40 CFR § 60.12 (relating to Circumvention)
- E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)
- F. Title 40 CFR § 60.14 (relating to Modification)
- G. Title 40 CFR § 60.15 (relating to Reconstruction)
- H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)
- 5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 61, unless otherwise stated in the applicable subpart:
  - A. Title 40 CFR § 61.05 (relating to Prohibited Activities)
  - B. Title 40 CFR § 61.07 (relating to Application for Approval of Construction or Modification)
  - C. Title 40 CFR § 61.09 (relating to Notification of Start-up)
  - D. Title 40 CFR § 61.10 (relating to Source Reporting and Request Waiver)
  - E. Title 40 CFR § 61.12 (relating to Compliance with Standards and Maintenance Requirements)
  - F. Title 40 CFR § 61.13 (relating to Emissions Tests and Waiver of Emission Tests)
  - G. Title 40 CFR § 61.14 (relating to Monitoring Requirements)
  - H. Title 40 CFR § 61.15 (relating to Modification)
  - I. Title 40 CFR § 61.19 (relating to Circumvention)
- 6. For facilities where total annual benzene quantity from waste is greater than or equal to 10 megagrams per year and subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:
  - A. Title 40 CFR § 61.342(c)(1)(i) (iii) (relating to Standards: General)
  - B. Title 40 CFR § 61.342(e)(1) (relating to Standards: General)
  - C. Title 40 CFR § 61.342(e)(2)(i) (ii) (relating to Standards: General)
  - D. Title 40 CFR § 61.342(f)(1), and (2) (relating to Standards: General)
  - E. Title 40 CFR § 61.342(g) (relating to Standards: General)
  - F. Title 40 CFR § 61.350(a) and (b) (relating to Standards: Delay of Repair)
  - G. Title 40 CFR § 61.355(a)(1)(iii), (a)(2), (a)(6), (b), and (c)(1) (3) (relating to Test Methods, Procedures, and Compliance Provisions)

- H. Title 40 CFR § 61.355(k)(1) (6), and (7)(i) (iv) (relating to Test Methods, Procedures, and Compliance Provisions), for calculation procedures
- I. Title 40 CFR § 61.356(a) (relating to Recordkeeping Requirements)
- J. Title 40 CFR § 61.356(b), and (b)(1) (relating to Recordkeeping Requirements)
- K. Title 40 CFR § 61.356(b)(4) (relating to Recordkeeping Requirements)
- L. Title 40 CFR § 61.356(b)(5) (relating to Recordkeeping Requirements)
- M. Title 40 CFR § 61.356(c) (relating to Recordkeeping Requirements)
- N. Title 40 CFR § 61.357(a), (d)(1), (d)(2) (d)(6) and (d)(8) (relating to Reporting Requirements)
- O. Title 40 CFR § 61.357(d)(5) (relating to Reporting Requirements)
- P. Waste generated by remediation activities at these facilities are subject to the requirements identified under 40 CFR § 61.342 for treatment and management of waste
- 7. For facilities with containers subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:
  - A. Title 40 CFR § 61.345(a)(1) (3), (b), and (c) (relating to Standards: Containers)
  - B. Title 40 CFR § 61.355(h) (relating to Test Methods, Procedures and Compliance Provisions)
  - C. Title 40 CFR § 61.356(g) (relating to Recordkeeping Requirements)
  - D. Title 40 CFR § 61.356(h) (relating to Recordkeeping Requirements)
- 8. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.
- 9. For the Off-Site Waste and Recovery Operations specified in 40 CFR Part 63, Subpart DD, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.350 incorporated by reference):
  - A. Requirements specified with reference to 40 CFR Part 63. Subpart A:
    - (i) Title 40 CFR § 63.680(f) for applicability of the General Provisions of Subpart A
    - (ii) Title 40 CFR § 63.696(a) (relating to Recordkeeping Requirements)
    - (iii) Title 40 CFR § 63.697(a) (relating to Reporting Requirements)
  - B. Title 40 CFR § 63.688(b) and (c) (relating to Standards: Containers), for control of air emissions
- 10. For containers using controls specified in 40 CFR Part 63, Subpart PP, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.470 incorporated by reference):

- A. Title 40 CFR § 63.922(b)(1) (3), (c), (d), (d)(1) (5), (e), and (f), (f)(1) (4) (relating to Standards Container Level 1 Controls)
- B. Title 40 CFR § 63.926(a)(1) (3) (relating to Inspection and Monitoring Requirements)
- 11. For benzene laden waste streams from ethylene process facilities subject to 40 CFR Part 63, Subpart YY with total annual benzene quantity from the facility of 10 megagrams per year or more the permit holder shall comply with the following requirements as specified in 40 CFR § 63.1095(b)(2) (Title 30 TAC Chapter 113, Subchapter C, § 113.560 incorporated by reference):
  - A. For facilities with waste managed in containers the permit holder shall comply with the following requirements:
    - (i) Title 40 CFR § 61.355(h) (relating to Test Methods, Procedures and Compliance Provisions)
    - (ii) Title 40 CFR § 61.356(g) (relating to Recordkeeping Requirements)
    - (iii) Title 40 CFR § 61.356(h) (relating to Recordkeeping Requirements)
- 12. For site remediation projects subject to 40 CFR Part 63, Subpart GGGGG that are completed within 30 consecutive calendar days the permit holder shall comply with 40 CFR § 63.7884(b), (b)(1) (3) (Title 30 TAC, Subchapter C, § 113.1160 incorporated by reference).
- 13. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

#### **Additional Monitoring Requirements**

14. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

#### **New Source Review Authorization Requirements**

15. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard

permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

- A. Are incorporated by reference into this permit as applicable requirements
- B. Shall be located with this operating permit
- C. Are not eligible for a permit shield
- 16. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
- 17. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).
- 18. The permit holder shall comply with the terms and conditions of the air addendum of the Industrial Hazardous Waste permits listed in the New Source Review Authorization Reference Attachment. Requirements other than those of the air addendum are not applicable to this operating permit.
- 19. The permit holder shall comply with the following requirements for Air Quality Standard Permits:
  - A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit
  - B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit
  - C. Requirements of the non-rule Air Quality Standard Permit for Pollution Control Projects

#### **Compliance Requirements**

- 20. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
- 21. Use of Discrete Emission Credits to comply with the applicable requirements:
  - A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

- (i) Title 30 TAC Chapter 115
- (ii) Title 30 TAC Chapter 117
- (iii) If applicable, offsets for Title 30 TAC Chapter 116
- (iv) Temporarily exceed state NSR permit allowables
- B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:
  - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)
  - (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
  - (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
  - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
  - (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

#### **Risk Management Plan**

22. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

#### **Protection of Stratospheric Ozone**

- 23. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:
  - A. The permit holder shall comply with 40 CFR Part 82, Subpart A for controlling the production, transformation, destruction, export or import of a controlled (ozone-depleting) substance or product as specified in 40 CFR § 82.1 § 82.13 and the applicable Part 82 Appendices.
  - B. The permit holder shall comply with 40 CFR Part 82, Subpart A, § 82.13 related to recordkeeping and reporting requirements for the production and consumption of ozone depleting substances.

#### **Alternative Requirements**

24. The permit holder shall comply with the approved alternative means of control (AMOC); alternative monitoring, recordkeeping, or reporting requirements; or requirements determined to

be equivalent to an otherwise applicable requirement contained in the Alternative Requirements attachment of this permit. Units complying with an approved alternative requirement have reference to the approval in the Applicable Requirements summary listing for the unit. The permit holder shall maintain the original documentation, from the EPA Administrator, demonstrating the method or limitation utilized. Documentation shall be maintained and made available in accordance with 30 TAC § 122.144.

#### **Permit Location**

25. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

#### Permit Shield (30 TAC § 122.148)

A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Unit Summary	15
Applicable Requirements Summary	23

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (§ 122.144), Reporting Terms and Conditions (§ 122.145), and Compliance Certification Terms and Conditions (§ 122.146) continue to apply.

### **Periodic Monitoring Summary**

Unit/Group/Process Information				
ID No.: UD633SLF				
Control Device ID No.: N/A	Control Device Type: N/A			
Applicable Regulatory Requirement				
Name: 40 CFR Part 61, Subpart M	SOP Index No.: 61M-0002			
Pollutant: 112(B) HAPS	Main Standard: [G]§ 61.154(c)			
Monitoring Information				
Indicator: Visible emissions				
Minimum Frequency: Once per week, or during each operating period.				
Averaging Period: N/A				

Deviation Limit: The presence of visible emissions shall be considered and reported as a deviation.

Periodic Monitoring Text: Visible emissions observations shall be made and recorded once every week or once during each period of operation if operating periods do not occur on a weekly basis (for multiple operating periods occurring within a single week, only one observation is required). Records of operating dates shall be kept.

Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded.

If visible emissions are observed, the permit holder shall report a deviation.

(NOTE: This periodic monitoring requirement applies only to the active section of landfill used for disposal of asbestos. Non-asbestos sections of the landfill are not required to comply with 40 CFR Part 61, Subpart M and do not require periodic monitoring.)

# UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 6 1445 ROSS AVENUE, SUITE 1200 DALLAS, TX 75202-2733

FEB 5 2010

Stancy Simpson, P.E.
Manager, Environmental Affairs
Eastman Chemical Company - Texas Operations
P.O.Box 7444
Longview, TX 75607-7444

RE: United States Environmental Protection Agency (EPA) Region 6 Response to the Alternative Monitoring Application (AMA) Request for the Fluidized Bed Incinerator (FBI) located at the Eastman Chemical Company Facility located in Longview, Texas; EPA ID TXD007330202

Dear Ms. Simpson:

We are providing a determination for the referenced unit in accordance with your AMA request dated December 3, 2009. Under the Hazardous Waste Combustion (HWC) Maximum Achievable Control Technology (MACT) EEE, this unit is commonly referred to as a Phase I unit. Based on our understanding of the available information, we have made a determination for your request. Please recognize that determinations are subject to change if any new information that could adversely affect the operation of your unit or the requirements of the National Emissions Standards for Hazardous Air Pollutants (NESHAP) standards under Subpart BEE is identified. A summary of your request follows with the determination.

#### Request: Use of the Relative Accuracy (RA) Procedure

Requested Alternative: The facility is proposing to use an alternate RA procedure for CO as allowed in the appendix to Subpart EEE, and described in Section 7.3 of Performance Specification (PS) 4B of 40 CFR Part 60 Appendix B. This alternative RA procedure will be used to evaluate the CO and O<sub>2</sub> continuous emission monitoring system (CEMS) on the hydrochloric acid recovery unit. This alternative has been proposed for future annual tests required under Subpart EEE.

Regulatory Requirement: Section 7.3 of PS-4B in 40 CFR Part 60 Appendix B states that under some operating conditions, it may not be possible to obtain meaningful results using the RA test procedure. This includes conditions where consistent, very low CO emission or low CO emissions interrupted periodically by short duration, high level spikes are observed. It may be appropriate in these circumstances to waive the RA test and substitute the alternative procedure. According to 40 CFR Part 63, Subpart EEB the CEMS must be tested annually for RA using the procedure in PS-4B.

Internet Address (URL) • http://www.apc.gov Recycled/Recyclable • Printed with Vogotable Of Based Inks on Recycled Paper (Minimus 26% Postochstmer) U.S. EPA AMA Response for the FBI TX Eastman - Longview

Technical Justification: The facility desires to use the alternative RA procedure described in Section 7.3 of PS-4B. They have submitted emission data over a 30-day period (including results of a recent RA test showing corrected CO emissions of 1 ppm or less) showing that the FBI consistently emits less than 10 ppmv CO with occasional spikes. The facility is proposing this for Subpart EBE requirements while they continue to perform the other quarterly absolute calibration audits (ACAs, where they will conduct the ACA in all 4 quarters and not just those where the RA test is not conducted) and daily zero/calibration drift tests required under the subpart. In accordance with the Resource Conservation and Recovery Act (RCRA), the Texas Commission on Environmental Quality (TCEQ) is notified by this request.

Determination: This request was approved by EPA Research Triangle Park (RTP) on January 27, 2010. See the attached memorandum.

All documents in support of compliance with the Subpart EEE regulations, and any supplemental information pertaining to your AMA requests, should be sent to fae following address:

United States Environmental Protection Agency - Region 6 Multimedia Planning and Permitting Division Attention: Kishor Fruitwala, Ph.D., P.E. (6PD-A) 1445 Ross Avenue Dallas, TX 75202

#### MEMORANDUM

SUBJECT: Eastman Chemical Company Request to Use an Alternative Relative Accuracy

Procedure under 40 CFR Part 63, Subpart EEE

FROM: Dr. Connies te B. Oldham, Group Leader

Measurement Technology Group, AQAD (E143-02)

Measurement Technology Group, 12715 (5145)

TO: Dr. Kishor Fruitwala, Section Chief

Media Planning and Permitting Division (6PD-A)

In correspondence forwarded to us by Mr. Harry Shah of Region 6, Eastman Chemical Company asks to use an alternative relative accuracy (RA) procedure to evaluate the carbon monoxide (CO) and oxygen continuous emission monitoring system (CEMS) on its fluidized bed incinerator (FBI) and rotary kiln incinerator (RKI) in Longview, Texas. The units are subject to 40 CFR Part 63, Subpart EEE, National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors. The CEMS must be tested annually for RA using the procedure in Performance Specification (PS) 4B.

Eastman desires to use the alternative RA procedure described in Section 7.3 of PS-4B. This procedure uses system integrity checks rather than a RA test against a reference method. This option is allowed under conditions of consistently low CO emissions or where low emissions with periodic interruptions by short-duration, high-concentration spikes make the RA test meaningless. Eastman has submitted emission data over a 30-day period showing that the units consistently emit very low levels of CO with occasional high-level spikes. They also forwarded the results of recent RA tests showing corrected CO emissions of 1 ppm or less.

Eastman asks that we allow them to use this alternative on all future annual tests required under Subpart EEE. They will continue to perform the other quarterly absolute calibration audits (ACA) and daily zero/calibration drift tests required under the subpart. They will conduct the ACA in all four quarters and hot just those where the RA test is not conducted:

Internet Address (URL) • http://www.eps.gov Rocycled/Recyclible • Printed with Vegelable Oil Based Inios on Recycled Paper (Minimum 25% Postconsume ATTORONOMOR - Maynormoun from RTP to EPA R6 for RBI/PKI page 2 of 2.
TX Eastman - Longview

We believe Bastman has demonstrated that the incinerators meet the conditions for using the alternative RA procedure. The consistently low emissions for the vast majority of the measurements make the normal RA procedure impractical. Therefore, we approve Bastman's request to use the alternative RA procedure in Section 7.3 of PS-4B at its FBI and RKI in Longview, Texas. This alternative procedure may be used for future RA tests at the facility provided the average hourly emissions remain less than 25 percent of the emission limit.

If you have any questions or would like to discuss the matter further, please contact Foston Cartis at (919) 541-1063 or curtis foston@eps.gov.

cc: Foston Curtis (E143-02) Harry Shah, Region 6 John Smith, Texas CEQ

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

NO<sub>x</sub> - total oxides of nitrogen

SO<sub>2</sub> - sulfur dioxide

PM - total particulate matter, suspended in the atmosphere, including PM<sub>10</sub> and PM<sub>2.5</sub>, as represented

PM<sub>10</sub> - total particulate matter equal to or less than 10 microns in diameter, including PM<sub>2.5</sub>, as represented

PM<sub>2.5</sub>-particulate matter equal to or less than 2.5 microns in diameter

CO - carbon monoxide HCI - hydrogen chloride HF - hydrogen fluoride

Cl<sub>2</sub> - chloride

- (4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
- (5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.

# Texas Commission on Environmental Quality Air Quality Permit

A Permit Is Hereby Issued To
Eastman Chemical Company
Authorizing the Continued Operation of
Eastman Chemical Texas Operations
Located at Longview, Harrison County, Texas
Latitude 32° 26′ 15″ Longitude–94° 41′ 7″

Permit: 9167 and F	/SD1X476M1	
Issuance Date:	April 26, 2019	
Expiration Date:	April 26, 2029	1 de Dalu
	•	For the commission

- 1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. [Title 30 Texas Administrative Code (TAC) Section 116.116 (30 TAC § 116.116)] <sup>1</sup>
- Voiding of Permit. A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1)the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
- 3. **Construction Progress**. Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.115(b)(2)(A)]
- 4. **Start-up Notification**. The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.115(b)(2)(B)]
- 5. **Sampling Requirements**. If sampling is required, the permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.115(b)(2)(C)]
- 6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.115(b)(2)(D)]
- 7. **Recordkeeping.** The permit holder shall maintain a copy of the permit along with records containing the information and data sufficient to demonstrate compliance with the permit, including production records and

Revised (10/12)

1

operating hours; keep all required records in a file at the plant site. If, however, the facility normally operates unattended, records shall be maintained at the nearest staffed location within Texas specified in the application; make the records available at the request of personnel from the commission or any air pollution control program having jurisdiction in a timely manner; comply with any additional recordkeeping requirements specified in special conditions in the permit; and retain information in the file for at least two years following the date that the information or data is obtained. [30 TAC § 116.115(b)(2)(E)]

- 8. **Maximum Allowable Emission Rates**. The total emissions of air contaminants from any of the sources of emissions must not exceed the values stated on the table attached to the permit entitled "Emission Sources--Maximum Allowable Emission Rates." [30 TAC § 116.115(b)(2)(F)] <sup>1</sup>
- 9. **Maintenance of Emission Control**. The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC§ 116.115(b)(2)(G)]
- 10. Compliance with Rules. Acceptance of a permit by an applicant constitutes an acknowledgment and agreement that the permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the permit. [30 TAC § 116.115(b)(2)(H)]
- 11. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
- 12. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.115(c)]
- 13. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
- 14. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit. <sup>1</sup>

Revised (10/12) 2

<sup>&</sup>lt;sup>1</sup> Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

## **Special Conditions**

#### Permit Numbers 9167 and PSDTX476M1

## **Federal Applicability**

- This permit covers those sources of emissions listed in the attached table, entitled "Emission Sources
   Maximum Allowable Emission Rates," and those sources are limited to the emission limits and other
  conditions specified in the attached table.
- 2. The permit holder shall not inject into the incinerator any hazardous constituent listed in Appendix VIII of 40 CFR Part 261 having a concentration greater than 100 parts per million (ppm) by weight in the waste if such a constituent has a heat of combustion of less than 0.75 kcal/gram.

## **Emissions Standards and Operating Specifications**

#### **Hazardous Waste Incinerator**

- 3. The facilities operated under this permit shall comply with all applicable requirements of the EPA regulations for the following:
  - A. 40 CFR Part 61, Subpart A General Provisions;
  - B. 40 CFR Part 61, Subpart E National Emission Standard for Mercury;
  - C. 40 CFR Part 61, Subpart J National Emission Standard for Equipment Leaks (Fugitive Emission Sources) of Benzene;
  - D. 40 CFR Part 61, Subpart V National Emission Standard for Equipment Leaks (Fugitive Emission Sources):
  - E. 40 CFR Part 61, Subpart FF National Emission Standard for Benzene Waste Operations;
  - F. 40 CFR Part 63, Subpart A General Provisions;
  - G. 40 CFR Part 63, Subpart DD National Emission Standards for Hazardous Air Pollutants from Off-Site Waste and Recovery Operations;
  - H. 40 CFR Part 63, Subpart UU National Emission Standards for Equipment Leaks Control Level 2 Standards:
  - I. 40 CFR Part 63, Subpart EEE National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors;
  - J. 40 CFR Part 63, Subpart FFFF National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing;
  - K. 40 CFR Part 63, Subpart GGGGG National Emission Standards for Hazardous Air Pollutants: Site Remediation.
- 4. If the carbon monoxide CEMS detects a response that results in a one-minute average at or above the 3,000 ppmv span limit while burning hazardous waste, the one-minute average must either be recorded as 10,000 ppmv and used in the calculation of the hourly rolling average or an automatic waste feed cutoff shall occur and the hazardous waste feed shall not be restarted until rolling average below 100 ppmv is re-established with a sixty one-minute readings subsequent to the automatic waste feed cutoff. If a 10,000 ppmv span analyzer is used, the actual reading shall be used in the calculation of the hourly rolling average.

## 5. Incinerator Performance Testing Requirements

The permittee will conduct analysis of the waste feed and sampling in accordance with the Feedstream Analysis Plan (initially submitted as part of the Comprehensive Performance Test Plan, as amended per 40 CFR 63, Subpart EEE). All emissions sampling, testing, and procedures to

- establish proof of performance shall be documented in the Comprehensive Performance Test Plan or the Confirmatory Test Plan, and submitted to the Executive director of the TCEQ. The TCEQ Executive Director, or designated representative, shall be afforded the opportunity to observe all such testing. The permit holder is responsible for providing sampling and analysis at his expense.
- 6. The permittee may conduct additional shakedown and testing in accordance with a test plan or Trial Burn Plan approved by the Executive Director. The permittee may conduct 720 hours of additional shakedown prior to conducting the tests. The results from the additional testing shall be used for the purpose of determining compliance with the performance standards of 40 CFR Part 63, Subpart EEE. After the approved testing is completed, the incinerator shall be operated in accordance with the operating conditions in effect prior to the commencement of the testing. The permittee may request a permit change pursuant to 30 TAC 116 to incorporate the new operating conditions demonstrated by the trial burn results.
- 7. Exhaust emissions shall be monitored as described in the Comprehensive Performance Test Plan, Confirmatory Test Plan, or other testing as described by 40 CFR 63, Subpart EEE, at a frequency determined by 40 CFR 63, Subpart EEE.
  - A. The permittee shall submit an original and four copies of a stack test plan to the TCEQ Regional Director at least 180 days prior to sampling and analysis. At a minimum, the test plan shall include the following, prepared in accordance with USEPA guidance:
    - 1. Sampling and Analysis Plan (SAP) describing the parameters to be tested, monitored and/or analyzed; and
    - 2. A Quality Assurance Project Plan.
  - B. The facility being sampled shall operate at maximum waste feed rates during the CPT stack emission testing. These conditions/parameters and any other primary operating parameters that affect the emission rate shall be monitored and recorded during the stack test. Any additional parameters shall be determined at the pretest meeting and shall be stated in the sampling report. Permit conditions and parameter limits may be waived during stack testing performed under this condition if the proposed condition/parameter range is identified in the test notice specified in paragraph A and accepted by the TCEQ Regional Office. Permit allowable emissions and emission control requirements are not waived and still apply during stack testing periods.
  - C. The Air Section of the appropriate TCEQ regional office shall be contacted a minimum of 60 days prior to sampling to schedule a pretest meeting.
  - D. An original and four copies of the final sampling report shall be forwarded to the Regional Director within 90 days after receipt of the sampling results, unless the Regional Director or designate issues an extension per 40 CFR 63, Subpart EEE.
- 8. The permittee shall maintain and operate the hazardous waste incinerator (EPN 187ES1) in accordance with the operating conditions specified in this permit to meet the following performance standards:

- A. A destruction and removal efficiency (DRE) of 99.99 percent for each principle organic hazardous constituent in each waste feed.
- B. Emissions of particulate matter not to exceed the Part 63 Subpart EEE standard of 0.013 gr/dscf corrected to 7 percent oxygen as demonstrated by the sampling method specified in Subpart EEE.
- C. Visible emissions, not including uncombined water, shall not exceed an opacity of 20 percent averaged over a six-minute period, except that visible emission during the cleaning of a firebox, soot blowing, equipment changes, and ash removal may exceed this opacity for a period aggregating not more than 6 minutes in any 60 consecutive minutes nor more than 6 hours in any 10-day period.
- D. Any deviation from or modification to Permit Number HW-50043 which would result in an air emissions increase or change or which conflicts with a condition of this permit shall require notification to the Air Permits Division of the Texas Commission on Environmental Quality (TCEQ) prior to the deviation or modification and may require a Chapter 116 or 106 authorization to this permit.
- E. Throughout normal operations, the holder of this permit shall conduct sufficient waste analysis in accordance with the Feed Stream Analysis Plan (FSAP) required by the Hazardous Waste Combustor (HWC) MACT (Part 63, Subpart EEE). Compliance with the most recently approved FSAP, as applicable, will be necessary for demonstrating continuous compliance with the emissions authorized by Subpart EEE and this permit.

## **Incinerator Continuous Demonstration of Compliance**

- 9. The permit holder shall install, calibrate, and maintain a continuous emission monitoring system (CEMS) to measure and record the in-stack concentrations of CO and oxygen from the incinerator stack (EPN 187ES1).
  - A. The CEMS shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and data analysis and reporting requirements specified in the applicable Performance Specifications Nos. 1 through 9, 40 CFR Part 60, Appendix B
  - B. Sections 1 and 2 below apply to sources subject to the quality-assurance requirements of the Appendix to Part 63 Subpart EEE.
    - The permit holder shall assure that the CEMS meets the applicable quality-assurance requirements specified in the Appendix to Part 63, Subpart EEE, Section 3. Relative accuracy exceedances, as specified in 40 CFR Part 60, Appendix F, '5.2.3 and any CEMS downtime shall be reported in the next periodic Part 63 Subpart EEE report.
    - 2. The CEMS shall meet the Performance Specification requirement of the Appendix to Part 63, Subpart EEE, Sections 6.3.1 and 6.3.2. The CEMS shall be zeroed and spanned daily, and corrective action taken when the 24-hour span drift exceeds two times the amounts specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B, or as specified by the TCEQ if not specified

in Appendix B. Zero and span is not required on weekends and plant holidays if instrument technicians are not normally scheduled on those days.

Each monitor shall be quality-assured at least quarterly using Cylinder Gas Audits (CGA) in accordance with 40 CFR Part 60, Appendix F, Procedure 1, Section 5.1.2, with the following exception: a relative accuracy test audit (RATA) is not required once every four quarters (i.e., four successive quarterly CGA may be conducted). An equivalent quality-assurance method approved by the TCEQ may also be used. Successive quarterly audits shall occur no closer than two months.

C. Monitoring data shall be reduced to hourly average concentrations at least once every day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of the permit allowable emission rate table in lb/hr at least once every day as follows:

The measured hourly average concentration from the CEMS shall be multiplied by the exhaust gas flow rate as measured by a differential pressure averaging pitot tube flow meter to determine the hourly emission rate.

- D. All monitoring data and quality-assurance data shall be maintained by the source. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit.
- E. The appropriate TCEQ Regional Office shall be notified at least 30 days prior to any required RATA in order to provide them the opportunity to observe the testing.
- F. Quality-assured (or valid) data must be generated when the hazardous waste incinerator is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the hazardous waste incinerator operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. Options to increase system reliability to an acceptable value, including a redundant CEMS, may be required by the TCEQ Regional Manager.
- 10. The rate of input of total chlorine (Cl<sub>2</sub>) or total fluorine (F) contained in materials to be incinerated shall not exceed the following rates:

 $\begin{array}{cccc} Total \ Cl_2 & - & 500 \ pounds \ per \ hour \\ Total \ F & - & 50 \ pounds \ per \ hour \end{array}$ 

In addition, if the rate of input of total F or total Cl<sub>2</sub> contained in materials that are incinerated exceeds by more than 10 percent the total Cl<sub>2</sub> or total F input rates maintained during sampling, the holder of this permit must notify the Executive Director of the Texas Commission on Environmental Quality (TCEQ) in writing. Additional sampling may be required to be performed to demonstrate compliance with all state and federal regulations.

- 11. Waste containing equal to or greater than 50 ppm by weight of polychlorinated biphenyls shall not be injected into the incinerator.
- 12. The total feed to the incinerator, including the waste and auxiliary fuel, is limited to a maximum of sixty (60) million BTU/ hour heat input, based on the 30-day average.
- 13. The total 30-day average heat value of the waste material and natural gas fired in the incinerator shall not be less than 5,000 BTU per pound of waste material that is fed to the incinerator.
- 14. The carbon monoxide (CO) emission to the atmosphere as measured in the incinerator stack for Emission Point No. 187ES1 shall be limited to 100 ppm, dry basis, corrected to 7 percent oxygen on an hourly rolling average at all times when waste is fed to the incinerator.
- 15. Natural gas, propane, waste liquid, and storage tank vent gas may be injected into the rotary kiln incinerator secondary combustion chamber.
- 16. Incinerator operating instructions shall be immediately available to incinerator operators.

## **Storage Tanks**

- 17. At least once per week, each container or tank of hazardous waste stored or handled in the incinerator area shall be inspected for signs of leakage, corrosion, or other apparent structural defects which are causing or may cause hazardous fugitive emissions.
- 18. Storage tank EPN 031T35 is subject to the following requirements:
  - A. Except for labels, logos, etc. not to exceed 15 percent of the tank total surface area, uninsulated tank exterior surfaces exposed to the sun shall be white or unpainted aluminum. Storage tanks must be equipped with permanent submerged fill pipes.
  - B. The permit holder shall maintain an emissions record which includes calculated emissions of VOC from the storage tank during the previous calendar month and the past consecutive 12month period.
    - Emissions from the tank shall be calculated using the methods that were used to determine the MAERT limits in the permit application. Sample calculations from the application shall be attached to a copy of this permit at the plant site.

## **Flare BACT Conditions**

- 19. Flares shall be designed and operated in accordance with the following requirements:
  - A. The flare systems shall be designed such that the combined assist natural gas and waste stream to each flare meets the 40 CFR § 60.18 specifications of minimum heating value and maximum tip velocity at all times when emissions may be vented to them.
    - The heating value and velocity requirements shall be satisfied during operations authorized by this permit. Flare testing per 40 CFR § 60.18(f) may be requested by the appropriate regional office to demonstrate compliance with these requirements.

- B. The flare shall be operated with a flame present at all times and/or have a constant pilot flame. The pilot flame shall be continuously monitored by a thermocouple, infrared monitor, or ultraviolet monitor. The time, date, and duration of any loss of pilot flame shall be recorded. Each monitoring device shall be accurate to, and shall be calibrated at, a frequency in accordance with the manufacturer's specifications.
- C. The flare shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours.

## Loading

20. Storage and transport vessel loading/unloading vapors shall not be displaced or otherwise vented directly to the atmosphere; these vapors may be vented to the atmosphere during major upset and maintenance in accordance with 30TAC §§101.201 and 101.211. Vapors may be routed to the incinerator firebox; or a carbon adsorption system, a catalytic incineration unit, a vapor recovery system designed and operated to achieve at least 95 percent efficiency in the removal of VOC emissions through the system; or a flare system capable of operating with no less than 98 percent efficiency disposing of the VOC emissions through the system. In addition, the flare system must be designed and operated in accordance with 40 CFR 60.18, including specifications of minimum heating value of the waste gas, maximum tip velocity and pilot flame monitoring. The storage/loading/unloading of waste with a vapor pressure less than 0.5 psia is excluded from these requirements.

## **Fugitives**

## Piping, Valves, Connectors, Pumps, Agitators, and Compressors in VOC Service – 28VHP

- 21. Except as may be provided for in the Special Conditions of this permit, the following requirements apply to piping, valves, connectors, pumps, agitators, and compressors containing or in contact with fluids that could reasonably be expected to contain greater than or equal to 10 weight percent volatile organic compounds (VOC) at any time:
  - A. The requirements of paragraphs F and G shall not apply (1) where the Volatile Organic Compound (VOC) has an aggregate partial pressure or vapor pressure of less than 0.5 pounds per square inch, absolute (psia) at 100°F or (2) to piping and valves smaller than two (2) inches nominal size or (3) where operating pressure is at least 5 kilopascals (0.725 psi) below ambient pressure. Equipment excluded from this condition shall be identified in a list or by one of the methods described below to be made readily available upon request.

The exempted components may be identified by one or more of the following methods:

- piping and instrumentation diagram (PID);
- a written or electronic database or electronic file;
- color coding;
- a form of weatherproof identification; or
- designation of exempted process unit boundaries.
- B. Construction of new and reworked piping, valves, pump systems, and compressor systems shall conform to applicable American National Standards Institute (ANSI), American

Petroleum Institute (API), American Society of Mechanical Engineers (ASME), or equivalent codes.

- C. New and reworked underground process pipelines shall contain no buried valves such that fugitive emission monitoring is rendered impractical. New and reworked buried connectors shall be welded.
- D. To the extent that good engineering practice will permit, new and reworked valves and piping connections shall be so located to be reasonably accessible for leak-checking during plant operation. Difficult-to-monitor and unsafe-to-monitor valves, as defined by Title 30 Texas Administrative Code Chapter 115 (30 TAC Chapter 115), shall be identified in a list to be made readily available upon request. The difficult-to-monitor and unsafe-to-monitor valves may be identified by one or more of the methods described in Paragraph A above. If an unsafe to monitor component is not considered safe to monitor within a calendar year, then it shall be monitored as soon as possible during safe to monitor times. A difficult to monitor component for which quarterly monitoring is specified may instead be monitored annually.
- E. New and reworked piping connections shall be welded or flanged. Screwed connections are permissible only on piping smaller than two-inch diameter. Gas or hydraulic testing of the new and reworked piping connections at no less than operating pressure shall be performed prior to returning the components to service or they shall be monitored for leaks using an approved gas analyzer within 15 days of the components being returned to service. Adjustments shall be made as necessary to obtain leak-free performance. Connectors shall be inspected by visual, audible, and/or olfactory means at least weekly by operating personnel walk-through.
  - Each open-ended valve or line shall be equipped with an appropriately sized cap, blind flange, plug, or a second valve to seal the line. Except during sampling, both valves shall be closed.
- F. Accessible valves shall be monitored by leak-checking for fugitive emissions at least quarterly using an approved gas analyzer. Sealless/leakless valves (including, but not limited to, welded bonnet bellows and diaphragm valves) and relief valves equipped with a rupture disc upstream or venting to a control device are not required to be monitored. If a relief valve is equipped with rupture disc, a pressure-sensing device shall be installed between the relief valve and rupture disc to monitor disc integrity.

A check of the reading of the pressure-sensing device to verify disc integrity shall be performed at least quarterly and recorded in the unit log or equivalent. Pressure-sensing devices that are continuously monitored with alarms are exempt from recordkeeping requirements specified in this paragraph. All leaking discs shall be replaced at the earliest opportunity but no later than the next process shutdown.

The gas analyzer shall conform to requirements listed in Method 21 of 40 CFR part 60, appendix A. The gas analyzer shall be calibrated with methane. In addition, the response factor of the instrument for a specific VOC of interest shall be determined and meet the requirements of Section 8 of Method 21. Alternatively, if a mixture of VOCs is being monitored, the response factor shall be demonstrated to be less than 10 for the average composition of the process fluid. This demonstration is not required when all of the compounds in the mixture have a response factor less than 10 using methane. If a response factor less than 10 cannot be achieved using methane, then the instrument may be calibrated

with one of the VOC to be measured or any other VOC so long as the instrument has a response factor of less than 10 for each of the VOC to be measured.

Replacements for leaking components shall be re-monitored within 15 days of being placed back into VOC service.

- G. Except as may be provided for in the special conditions of this permit, all pump, compressor, and agitator seals shall be monitored with an approved gas analyzer at least quarterly or be equipped with a shaft sealing system that prevents or detects emissions of VOC from the seal. Seal systems designed and operated to prevent emissions or seals equipped with automatic seal failure detection and alarm system need not be monitored. These seal systems may include (but are not limited to) dual pump seals with barrier fluid at higher pressure than process pressure, seals degassing to vent control systems kept in good working order, or seals equipped with an automatic seal failure detection and alarm system. Submerged pumps or sealless pumps (including, but not limited to, diaphragm, canned, or magnetic-driven pumps) may be used to satisfy the requirements of this condition and need not be monitored.
- H. Damaged or leaking valves or connectors found to be emitting VOC in excess of 500 parts per million by volume (ppmv) or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired. Damaged or leaking pump, compressor, and agitator seals found to be emitting VOC in excess of 10,000 ppmv or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired. A first attempt to repair the leak must be made within 15 days and a record of the attempt shall be maintained.
- I. A leaking component shall be repaired as soon as practicable, but no later than 15 days after the leak is found. If the repair of a component would require a unit shutdown that would create more emissions than the repair would eliminate, the repair may be delayed until the next scheduled shutdown. All leaking components which cannot be repaired until a scheduled shutdown shall be identified for such repair by tagging within 15 days of the detection of the leak. A listing of all components that qualify for delay of repair shall be maintained on a delay of repair list. The cumulative daily emissions from all components on the delay of repair list shall be estimated by multiplying by 24 the mass emission rate for each component calculated in accordance with the instructions in 30 TAC 115.782 (c)(1)(B)(i)(II). The calculations of the cumulative daily emissions from all components on the delay of repair list shall be updated within ten days of when the latest leaking component is added to the delay of repair list. When the cumulative daily emission rate of all components on the delay of repair list times the number of days until the next scheduled unit shutdown is equal to or exceeds the total emissions from a unit shut down as calculated in accordance with 30 TAC 115.782 (c)(1)(B)(i)(I), the TCEQ Regional Manager and any local programs shall be notified. The Executive Director or his designated representative may require early unit shutdown or other appropriate action based on the number and severity of tagged leaks awaiting shutdown. This notification shall be made within 15 days of making this determination.
- J. Records of repairs shall include date of repairs, repair results, justification for delay of repairs, and corrective actions taken for all components. Records of instrument monitoring shall indicate dates and times, test methods, and instrument readings. The instrument monitoring record shall include the time that monitoring took place for no less than 95 percent of the

- instrument readings recorded. Records of physical inspections shall be noted in the operator's log or equivalent.
- K. Alternative monitoring frequency schedules of 30 TAC 115.352 115.359 or National Emission Standards for Organic Hazardous Air Pollutants, 40 CFR Part 63, Subpart H or Subpart UU, may be used in lieu of Items F through G of this condition.
- L. Compliance with the requirements of this condition does not assure compliance with requirements of 30 TAC Chapter 115, an applicable New Source Performance Standard (NSPS), or an applicable National Emission Standard for Hazardous Air Pollutants (NESHAPS) and does not constitute approval of alternative standards for these regulations.
- 22. Special Condition 21- pertaining to LDAR requirements shall be implemented within 6-months of this renewal.
- 23. As an alternative to comparing the VOC emissions that would occur during the next scheduled process unit shutdown and subsequent startup, all components on the DOR list subject to Special Condition No. 21 may be compared to fifty percent of the total process fugitive components VOC hourly allowable rate on the MAERT to determine if the TCEQ Regional Manager is to be notified.
- 24. With respect to Special Condition No. 21, "new and reworked" is meant to apply to major changes in piping. It is not intended to apply to minor activities including but not limited to: installation/replacement of small number of valves and flanges; minor repairs; gasket replacement; repair/replacement of small sections of piping, etc. Also, "process pipelines" does not apply to underground process sewer lines, cooling tower water, fire water, etc. Additionally, the requirement for new and reworked buried connectors to be welded will not apply if compliance would require a process unit shutdown or would create a safety issue including (but not limited to) close proximity of other process pipelines and equipment or unsafe access to the piping.
- 25. In lieu of the requirement to gas or hydraulic test new and reworked piping connections at operating pressure or monitor within 15 days contained in Special Condition No. 21, new and reworked piping connections may be tested in accordance with the currently approved "System Leak Test" procedure to look for leaks. This testing will be followed up by an AVO inspection within 7 days of the piping being placed back into service.

## **Recordkeeping Requirements**

26. A copy of this permit shall be kept at the plant for the life of the permit and shall be made available at the request of personnel from the TCEQ, EPA, or any air pollution control agency with jurisdiction.

## Standard Permit Incorporated by Reference

27. The following sources and/or activities are authorized under a Standard (SP) by Title 30 Texas Administrative Code Chapter 116 (30 TAC Chapter 116), and are incorporated by reference. The authorizations remain in effect, and their emissions are not listed on the permit's MAERT. This list is not intended to be all inclusive, and it can be altered without modification to this permit.

Authorization	Source or Activity
30 TAC §116.110 and 116.601-615 (Reg. No. 148153)	Associated piping and fugitive components

Date: April 26, 2019

#### Emission Sources - Maximum Allowable Emission Rates

#### Permit Number 9167 and PSDTX476M1

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Air Contaminants Data

Emission Point No.	0 N (6)		Emission Rates		
(1)	Source Name (2)	Air Contaminant Name (3)	lbs/hour	TPY (4)	
187ES1	Rotary Kiln and Stationary secondary	VOC	0.33	1.50	
	combustion chamber Waste Incinerator	NO <sub>x</sub>	32.20	141.04	
	waste incinerator —	SO <sub>2</sub>	7.79	17.15	
		PM	4.24	18.56

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

NO<sub>x</sub> - total oxides of nitrogen

SO<sub>2</sub> - sulfur dioxide

 $PM \quad \text{-} \quad \text{total particulate matter, suspended in the atmosphere, including $PM_{10}$ and $PM_{2.5}$, as represented}$ 

PM<sub>10</sub> - total particulate matter equal to or less than 10 microns in diameter, including PM<sub>2.5</sub>, as represented

PM<sub>2.5</sub> - particulate matter equal to or less than 2.5 microns in diameter

Project Number: 284696

## Emission Sources - Maximum Allowable Emission Rates

CO - carbon monoxide HCI - hydrogen chloride HF - hydrogen fluoride

Cl<sub>2</sub> - chloride

(4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.

(5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
